Dear Sabyasachi,

My name is Dora, and I work with PLOS' outreach team. We're starting a new program that highlights our authors and their work, and we want to showcase you! We're eager to hear why your research is important to you, the research community, and the broader public. We'll then share your story in our online channels, including newsletter emails and social media, and we'll link to your article to raise visibility of your work.

*To participate:*

Just send us a brief summary of your experience in 3-4 sentences summarizing your answers to one or all of the questions below. You can also choose to answer each question individually, and I'll compile a quotation for you. Please also send a high resolution photo of you in the lab or the field (make sure your image is available for re-use under a [CC BY license](#)) and your Twitter handle, if you have one.

- What first drew you to your field of research?
- What is your particular area of research, and why is it important?
- Has your (and your peers') work expanded discussion in the scientific community or the broader public?
- Is your research interdisciplinary? If so, how crucial are structures that support interdisciplinary review to the publication of your research? For example, we aim to ensure peer review by experts that cover all relevant subject areas, and do have Academic Editors across a very broad range of disciplines that can provide input into all aspects of a submitted manuscript.
- At what time in your career did you start thinking about Open Science, and why is it important to you?
- In summary, what drives you in your career in science?

I've attached some recent examples, to give you an idea of the final product.

Thank you for participating in the *PLOS ONE* community as an author, and please don't hesitate to get in touch if you have any questions. We hope that you will take this opportunity to share your experience.

Best regards,  
Dora

Dear Sabyasachi,

My colleague Dora

kindly passed your message on to me. Thank you for sharing your experiences as a researcher and author with the PLOS ONE community!

I've attached a graphic that includes one of your comments. We'll aim to share it out across our social media networks within the next few weeks, along with a link to your published article. Please feel free to share it with your own networks as well--and let us know if we can do anything to help.

We so much appreciate your contributions to  
*PLOS ONE*!

All the best, Rommel

“

I study digital text data availability on a large scale which can be used to study time perspective with the help of concepts from machine learning and NLP. This can be used to get more generalised conceptions about time perspective and help in health and psychology.
